Digital Literacy Project Report

Course Code: CSE0001

Course Title: Digital Literacy

Name: Mohd Suhaib Khan

Registration Number: 25BAI11349

Branch: B.Tech CSE Core

Year: First Year

Submission Date: 31/03/2026

Introduction

In today's digital age, technology is the core of education, communication, and career building. As students, we often make use of different online resources and tools in our daily lives, but to make the best use of them is the real challenge, which is only possible through digital literacy. The project was initiated to make us understand the ways of creating a digital presence, communicating appropriately in the digital sphere, collaborating through digital platforms, and protecting ourselves from cyber attacks and other online risks. As a student digital ambassador, the project's objective was to develop resources and examples that could guide my fellow students in making the best use of the digital sphere. The project consisted of five different modules, each covering different aspects of digital literacy—awareness, creating a digital portfolio, collaborating, communicating appropriately in the digital sphere, and cybersecurity.

Task 1 Infographic

For this task, I used **Canva** to design an infographic on the topic of Digital Literacy Awareness, which would fit on a single page. I used Canva because of its user-friendly interface, availability of various templates, and access to icons that can be used to make the infographic visually appealing in presenting information. The infographic I designed covered three main topics: what digital literacy means, safe use of the internet, and having a professional online presence. The infographic provided an overview of what digital literacy means, which is not just about using devices, but also about understanding the risks of using the internet, communicating in an appropriate manner, and behaving in an ethical way. It provided tips on how to use strong passwords, verify information before sharing, and use respectful communication. The challenge I faced was deciding on the most important information to include on the infographic, making sure that the design was clean and uncluttered. It was interesting to see how the presentation of information visually could make a difference in how seriously people would take the information provided.

Task 2 Digital Portfolio

For this task, I had to create or edit my profiles on GitHub, LinkedIn, and HackerRank. GitHub is for programmers to show off their coding projects and other technical work, whereas LinkedIn is for professional networking. Similarly, HackerRank is for demonstrating my problem-solving abilities through coding problems.

For GitHub, I had to create a README file for my GitHub profile with my name, branch, year, and my aim to hone my programming skills during my B.Tech. For LinkedIn, I had to fill in my educational information, including my current degree and educational institute. These three platforms will be helpful in my future internship and professional life.

In the coming years, I plan to add my coding projects to GitHub, make professional and alumni connections on LinkedIn, and practice problems on HackerRank to hone my programming abilities. This task has also taught me that creating a professional online presence is not something that is done overnight.

Task 3 Platforms

For this task, I explored both a coding practice platform and a collaboration tool. I created an account on **HackerRank** and completed a beginner-level challenge. This platform helps students improve logical thinking and programming skills through structured problems and immediate feedback. Solving even a basic challenge gave me confidence and introduced me to the format used in technical assessments.

For collaboration, I created a **Google Form** as a Digital Literacy Awareness Quiz for my batchmates. The form included five questions with different formats such as multiple-choice and short-answer responses. I also reviewed the automatically generated Google Sheet containing responses, which demonstrates how data collection and analysis can be done efficiently.

These tools will be useful academically because coding platforms help prepare for technical exams and placements, while collaboration tools enable surveys, feedback collection, and group work management. This task highlighted how digital platforms can support both individual learning and collective activities.

Task 4 Communication Scenario

Lack of proper digital communication can lead to misunderstandings, which may affect professional relationships. For instance, a student may send an informal email to a professor requesting an extension of an assignment. The email may fail to include a subject line, may be informal, or may fail to explain the reasons for requesting an extension. This may lead to a misunderstanding, making it difficult for the professor to approve the request.

The best way to communicate in such a situation would be to include a subject line, use formal language, explain the reasons for requesting an extension, and thank the professor for considering the request. This way, the student would be showing responsibility and respect for the professor's time.

Although informal communication is appropriate in some cases, such as communicating with friends, academic and professional communications should be formal.

Task 5 Cybercrime Reflection

During my research on cybercrime, I was surprised by how common online fraud is and how easy it is for people to fall prey to it. For instance, in phishing scams and UPI frauds, psychological manipulation is often used rather than technical hacking.

This research has also taught me that awareness is not enough; it is also important to be cautious. One thing that I will be changing in my life is that I will make sure to verify any unexpected message or link sent to me, especially if it is regarding financial transactions or account information.

Cyber threats are important for students to understand because technology is now an integral part of our lives.

Conclusion

This project gave me an overall understanding of digital literacy beyond basic technical skills. It also showed me how professional identity, communication, collaboration, and cybersecurity are linked in the digital world. By completing these tasks, I have gained practical experience in creating online profiles, using online learning platforms, creating awareness resources, and being digitally safe.

As a student digital ambassador, I feel I am now better equipped to assist my peers in being safe and effective digital citizens. This project has shown me that digital literacy is an ongoing process of being aware, critical, and constantly improving.
